

## Slider Popup.

This driver can be used to make a popup visible when a variable changes.

### **Driver configuration:**

Select how many popups you require in the project.

Specify if you want the popups to be exclusive. In exclusive mode only one popup or layer will be displayed at any one time.

Specify how long you would like each popup to appear for in seconds.

Select the variable that you would like the popup to subscribe to.

### **Driver Variables:**

A Boolean variable is available for each popup or layer. Use this to set the visibility of the objects or layers in the project.
